# 02 How to train a defender

# Nothing new

Four focus areas to plan:

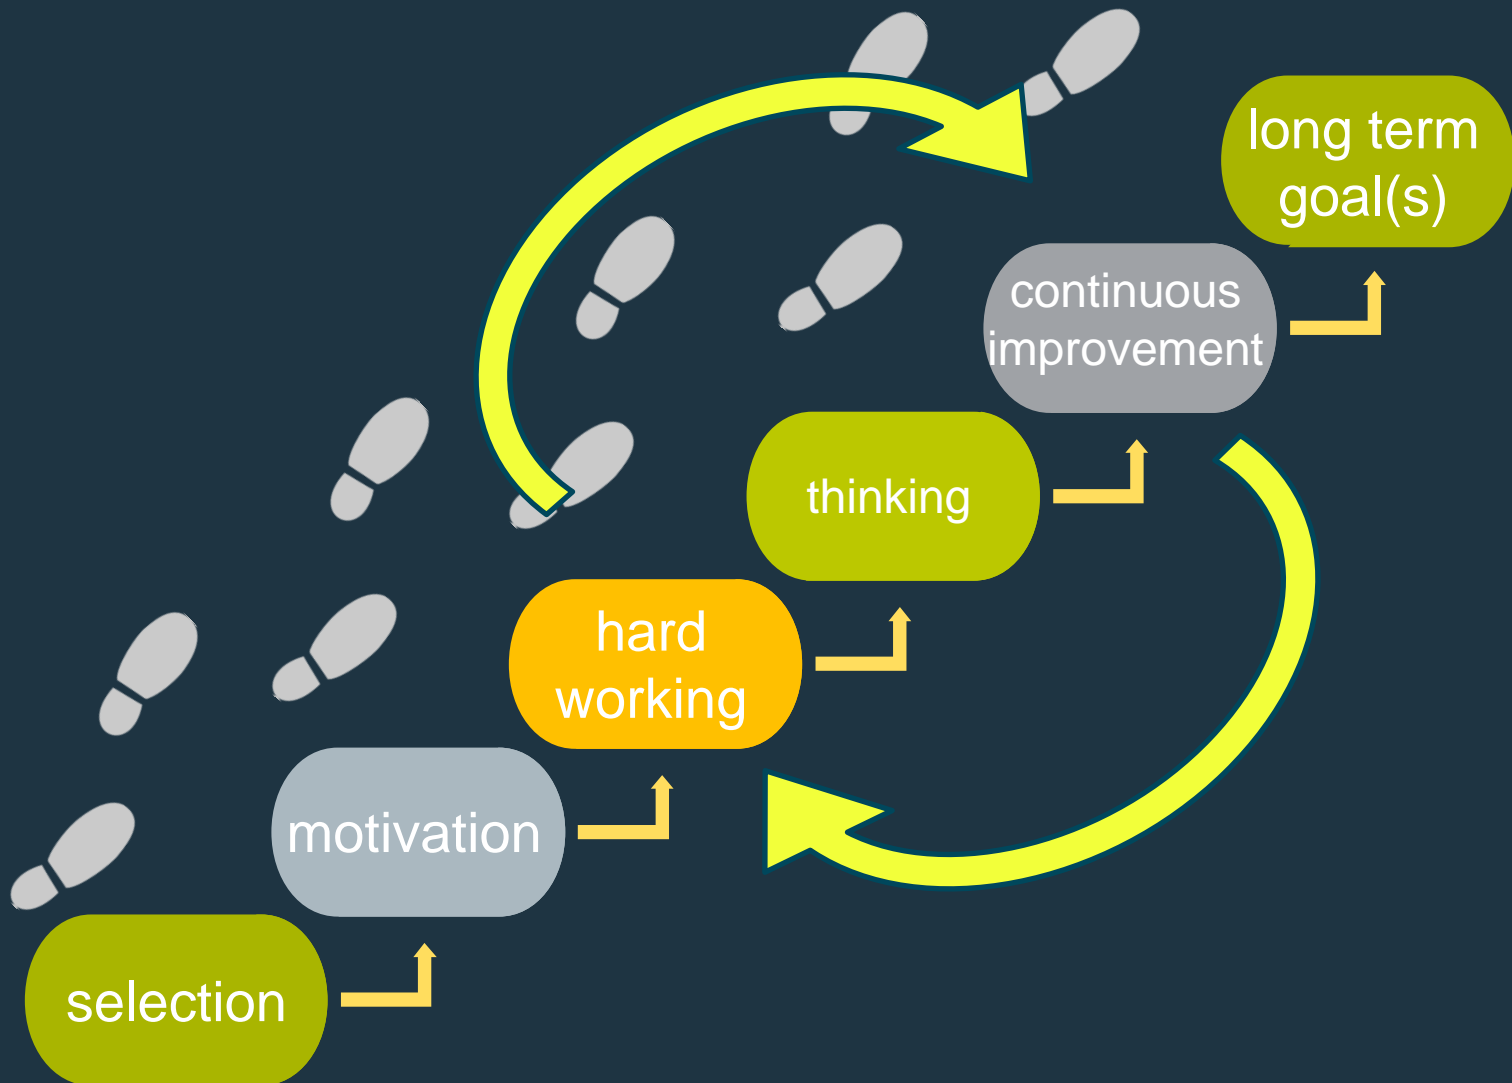

# To get rid of own

# To misuse opponent

# Long term steps

# 03 How to choose right material for defender

# Diversity of materials

*However number of defenders specific materials are less then for other type of play, diversity of materials are also huge.*

## What are basic characteristics of **rubbers** for defenders:

- Receive control
- Spin manipulation
- Speed dumping
- Trajectory characteristic (low)

## What are basic characteristics of **blades** for defenders:

- Size and shape (big sweet spot)
- Speed (dumping frequency)
- Control (softness/hardness)
- Handle (twiddling)

# Role of pimples

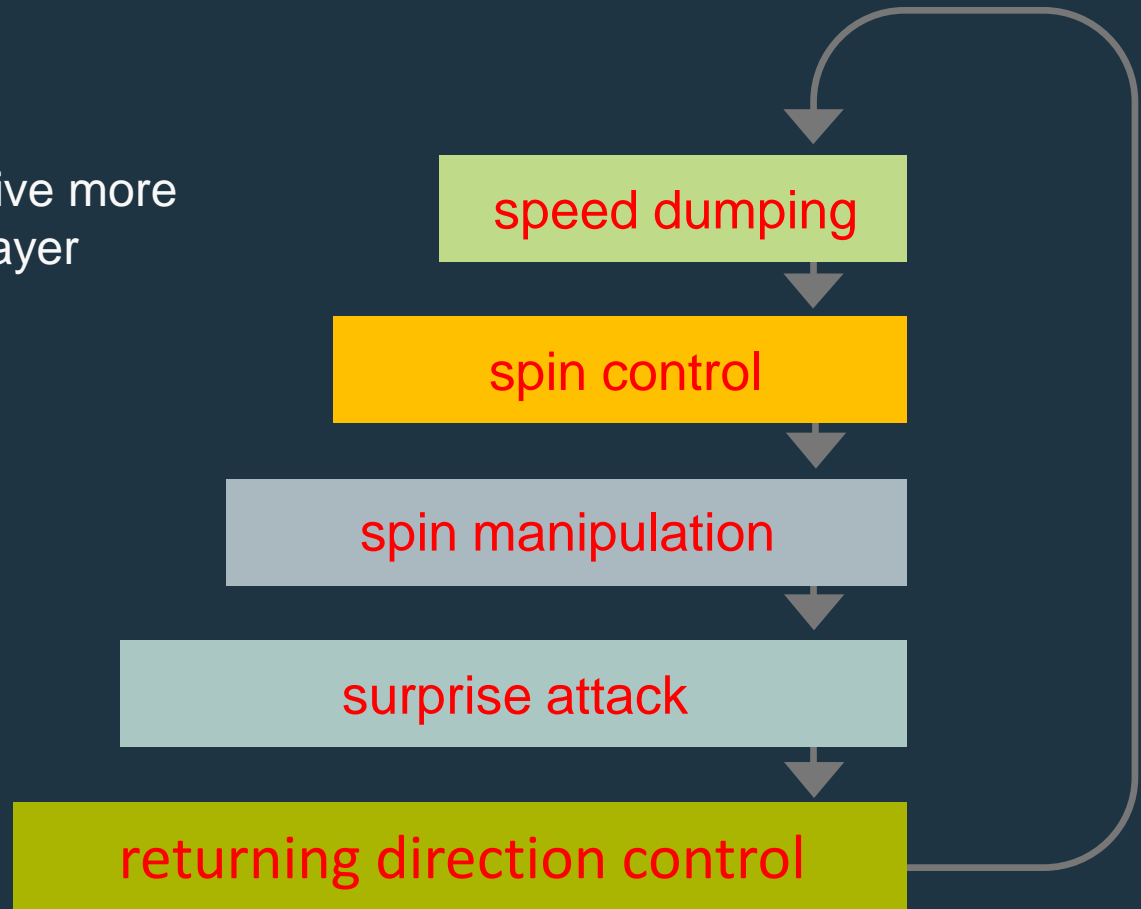

Almost all defenders use pimples rubbers.

# Why pimples?

*Because it gives more possibility for strokes variations*

In addition, diversity, will give more options to fit material to player habits.

# Example video with Kim Song I

# Changes in time

- **Different colors of rubbers**
- **Bigger size of ball**
- **Plastic ball**
  - Very hardness (lower deformation ->less pimples are touched)
  - Low stickiness (less possibility of spin manipulation)
  - Ball even bigger (lower control)
  - Bigger speed (required more dumping or more to the body strokes)

**Is still future for defenders?**
